Subject Docket No. 2003-295-W

Application of Georgia Water and Well Services, Inc. For approval of an increase in water rates and charges for Port Bass I & II and Timberlake I & II.

Dear Sir,

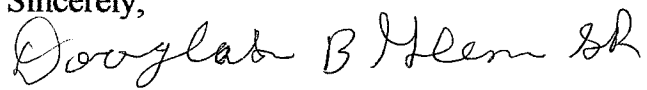

The reason I wanted to intervene and to ask questions to GW&W Inc. is because I do not agree to an 87% increase. GW&W Inc. has not done what they have said they would do to improve our water safety and production. DHEC made GW&W hook onto Pioneer Water because they did not have an emergency back up for our water systems also could not furnish us with adequate water service and pressure in our water lines. This water system system is not up to regulation; the system is not up to date with the lines. I have a letter from DHEC in Anderson when Chris Eleazor (Environment Manager Appalachia I EQC) did an inspection of water systems at Port Bass I & II in October 2001; David Shumaker stated he was not sure where any of the shut off valves was at in the water system. GW&W has had nine years to upgrade these systems and have not done so yet except for a few things. In a letter from F.L. Combs P.E. Consulting Engineer to Richard Phillips P.E. District Engineer with DHEC states that the connection from Pioneer Water to GW&W was for an emergency only and if there were any substantial growth in the water system this emergency line would not be an adequate water supply.

There have already been two commercial businesses that have been added to our water system. In 2001 & 2002 GW&W Inc. has asked for an increase in our water system in 2001-2002 but they withdrew their increase in March 2002. I asked for sample reports from GW&W Inc. and reports from DHEC but I have not received anything from GW&W.

Timberlake I & II also have the same problems with their water system; and Timberlake cannot get any of their roads fixed and paved because their water lines are in the road. GW&W have sent a letter to the county supervisor telling him they

would move the water lines but as of January 2004 GW&W have not done anything about moving the water lines. The Oconee County Supervisor is working with Timberlake and Port Bass to try and get GW&W Inc. to fix the water system. These are some of the reasons that I would like to intervene.

Sincerely,

A handwritten signature in cursive script that reads "Douglas B. Glenn Sr.".

Douglas B. Glenn Sr.
